

American Railway Engineering and Maintenance-of-Way Association

CHAPTER 33

ELECTRICAL ENERGY UTILIZATION¹

TABLE OF CONTENTS

Part/Section	Description	Page
1	Factors to Consider in Making Electrification Economic Studies	33-1-1
1.1	General	33-1-2
1.2	Traffic	33-1-3
1.3	Capital Equipment Costs	33-1-4
1.4	Annual Operating Expenses	33-1-6
1.5	Maintenance-of-Way Changes	33-1-8
1.6	Intangible Benefits and Liabilities	33-1-9
2	Clearances	33-2-1
2.1	Third-rail Clearance Diagram (1995)	33-2-2
2.2	Recommended Clearance Specification to Provide for Overhead Electrification	33-2-2
3	Recommended Voltages	33-3-1
3.1	Introduction	33-3-1
3.2	Definitions	33-3-2
3.3	Design Criteria (2008)	33-3-3
3.4	Recommended Voltages for New Construction (2008)	33-3-3
4	Railroad Electrification Systems	33-4-1
4.1	Catenary Definitions, Standards and Concepts	33-4-3
4.2	Catenary System Design Criteria	33-4-8
4.3	Electrification Feeding and Sectionalizing Arrangements	33-4-19
4.4	Contact Wire Ampacity	33-4-23

¹ The material in this and other chapters in the AREMA *Manual for Railway Engineering* is published as recommended practice to railroads and others concerned with the engineering, design and construction of railroad fixed properties (except signal and communications), and allied services and facilities. For the purpose of this Manual, RECOMMENDED PRACTICE is defined as a material, device, design, plan, specification, principle or practice recommended to the railways for use as required, either exactly as presented or with such modifications as may be necessary or desirable to meet the needs of individual railways, but in either event, with a view to promoting efficiency and economy in the location, construction, operation or maintenance of railways. It is not intended to imply that other practices may not be equally acceptable.

TABLE OF CONTENTS (CONT)

Part/Section	Description	Page
5	Signal Compatibility with Alternating Current Railway Electrification	33-5-1
5.1	Scope (1982)	33-5-2
5.2	Requirements of the Signal and Electrification Systems	33-5-2
5.3	Electrical Effects (1981)	33-5-3
5.4	Discussion (1981)	33-5-3
5.5	Recommendations (1981)	33-5-4
5.6	Use of Impedance Bonds with Alternating Current Railway Electrification.	33-5-5
6	Traction Power Supply Requirements for Railroad AC Electrification Systems	33-6-1
6.1	General.	33-6-3
6.2	Electrification System Load	33-6-3
6.3	AC Electrification System Configuration.	33-6-5
6.4	Electrification System Selection	33-6-15
6.5	System Studies	33-6-18
6.6	System Design.	33-6-20
6.7	Utility Metering	33-6-28
6.8	Construction	33-6-29
7	Rail Bonding	33-7-1
7.1	Method of Determining Rail Bond Sizes – Electric Traction.	33-7-3
7.2	Specification for Stud Terminal Copper Rail Bonds	33-7-6
7.3	Specification for Welded Type Rail Head U-bonds and Extended Bonds	33-7-11
7.4	Specification for Rail-head Pin-type Bonds and Track Connectors	33-7-15
7.5	Specification for Thermite Type Welded Rail-head Bonds and Track Connectors	33-7-17
7.6	Specification for Copper Thermite Welded Electrical Connections.	33-7-21
8	Catenary and Locomotive Interaction	33-8-1
8.1	Locomotive Electric Interaction with the Catenary.	33-8-2
8.2	Locomotive Mechanical Interaction with the Catenary	33-8-8
9	Ancillary Power Systems	33-9-1
9.1	Wayside/Standby Power Systems	33-9-1
10	Illumination	33-10-1
10.1	Illumination.	33-10-2
10.2	Lighting of Fixed Properties.	33-10-2
10.3	Factors Affecting Efficient Lighting	33-10-9
10.4	Lamps.	33-10-11
10.5	Evaluation Measurements and Tests	33-10-11
12	Power Supply and Electrification Systems	33-12-1
12.1	Introduction	33-12-2
12.2	Electric Traction Systems Considerations.	33-12-3
12.3	Electrification System Design Characteristics	33-12-7
12.4	Traction Power Equipment	33-12-22
12.5	Special Considerations.	33-12-26
12.6	Testing and Analysis	33-12-27
Chapter 33	Glossary	33-G-1
